

planIT tests

1. Login Page fields should be validated
The website should validate all the mandatory fields

Given that I am a registered user
When I enter my email without @gmail.com
Then I should be notified to enter an email correctly and take me back to the login window **and** still have my previously entered details
2. Login Page authentication
A registered user should be able to successfully login

Given that I am a registered user
When I enter my credentials correctly and press login
Then I see my application **and** get a Welcome message
3. Check stock while adding to the cart
Only products which are available should be added to the cart

Given that I am logged in
When I click buy on a product
Then it should check the product is available in the database **and** add it to the cart **and** update the cart
4. Check stock while adding to the cart
Products not available should not be added

Given that I am on the shop page
When I click buy on a product
Then it should check the availability of the product in the database **and** notify me if it's out of stock.
5. Check the right product is added to the cart
The product added should reflect correctly in the cart

Given I am on the shop page
When I click buy on a product
Then the same product should be added correctly to the cart **and** the cart page should also display the same product
6. Check the prices are calculated correctly

Given I am on the cart page
When I increase the quantity of a product
Then it should calculate the total price correctly

7. Check the database records have been modified to reflect the stock purchased

Given I am at the checkout page

When I click submit

Then upon successful purchase, the database should update to reflect the current stock which can be purchased **and** show me a completed purchase screen

8. Check the contact forms are correctly stored and passed on

Given I am on the contact page

When I click submit

Then the form should be extracted in the right format **and** sent to the corresponding email address

9. Check the website is responsive

Given I am on any page

When I resize the window

Then the page should organise components to fit the page

10. Check the website is compatible with different browsers

Given I want to open the application

When I go to the site from a different browser like Firefox, Internet Explorer, Safari etc

Then the page should load all the fonts and styles as it normally would
